

## **Possibility Thinking: NeuroScience Meets Business**

How many times have you come up with brilliant possibilities for your life or business – and then immediately dismissed them as “Impossible” without a second consideration? The latest NeuroScience research explains why our efforts toward success get derailed by our own minds. Learning how the brain functions and how to manage its normal tendencies can lead to incredible improvements in both your business and personal life. How much would that be worth to you?

### **During this interactive seminar, you will:**

- Learn some amazing facts about your brain from the latest neuroscience research
- Explore how your senses and mind operates to keep you “safe” from possibilities
- Develop the ability to upgrade your mental and emotional “software”
- Generate new possibilities for more fulfillment at work and home
- Gain skills for more powerful and creative problem-solving
- Set goals and action plans to move into new levels of success

**Dates\*:** Thursday, **April 1, 2010**
